Burners is an AI agent based on deep learning to serve into the educational industries for various purposes to take care of the student, teachers, parents, and administration to ensure the operations appropriately and efficiently.

What is SaaS Model

Software as a service (SaaS) is a model for using software as a subscription service instead of buying the license and installing the application files on a local computer from a CD, or increasingly as a download from a vendor website.

Software as a Service is generally priced on a per-user basis for each application, with billing managed by a major credit card. Sometimes there are minimum user requirements, minimum subscription time periods, as well as additional fees for setup, extra bandwidth and storage.

Benefits of SaaS

- ▶ Application service round the clock
- ▶ Cost effective, product maintenance, software installations, support and infrastructure are least required by SaaS
- ▶ Rapid. Deployment
- ▶ Enhanced Teamwork
- ▶ Simple to Use
- ▶ Mobility & Scalability
- ▶ GEO-Specific Hosting

What is License Model

License is the authorization that grants one user the right to use a software package. It may grant the user the right to install the software on only one machine, or it may authorize installation on any number of machines as long as that same licensee is the only user.

Benefits of License Based Software

- ▶ Application service round the clock
- ▶ Easier to administer by simplifying software asset management since the licenses reside on a single license server instead of on each individual workstation
- ▶ Licenses are available to all workstations connected to the company network maximizing software asset utilization
- ▶ License idle time is minimized by sharing
- ▶ Cost effective: less licenses are required when a company has many users

SaaS on Education Management Software Solution Powered by AI Technology

The SaaS application for administration is very simpler. Students and teachers can use this application very easily. Also they can work from anywhere and sharing files easily. Also, SaaS makes the budgeting easier

License Based Education Management Software Solution

This automated Smart Edu ERP is a blessing of those kinds of smart leaders who run any educational organization and dream to reach secure position in the business field. Managers & visionary entrepreneurs of our country need to adopt education ERP to speed up the present Goal of ICT. This lucrative, customizable education ERP software can be handled by anyone with basic IT knowledge.
